

NAME

server – Receive and process client transactions.

SYNOPSIS

./server [*PORT-NUMBER*]

DESCRIPTION

server waits for incoming connections from clients and accepts them. After accepting, it reads transactions to process from the client. This single-threaded server handles one client at a time. After the transactions are executed the connection is closed and the server loops back to listening for connections. The server terminates after 30 seconds, also displaying a summary of all the transactions executed.

OPTIONS**PORT-NUMBER**

Set the port that the server will listen for connections on.
